

Meningitis B Vaccine Schedule

- Children between 2-6 months of age need 4 doses.
- Children between 6 months and 2 years of age need 3 doses.
- Children over 2 and adults require 2 doses, but it has not yet been established whether a booster dose is needed to maintain protection in these age groups.

The vaccine is not licensed for children under 8 weeks old because there is not enough information about how well the vaccine works in this age group.

Age Group	Primary dose & Interval	Booster
2 - 5 months	3 - Not less than 1 month	Between 12 - 15 months of age (Not later than 24 months of age)
6 - 11 months	2 - Not less than 2 months	Between 12 - 24 months of age (At least two months after the primary course)
12 - 23 months	2 - Not less than 2 months	12 - 23 months after primary course
Children, 2 - 10 years	2 - Not less than 2 months	Not yet established
Those over 11 years	2 - Not less than 1 months	Not yet established
